

Protect B2B payments against fraud

Mitigate the increasing risk of fraud with powerful patented protection for outgoing and incoming payments

Your payments are at risk

Cybercriminals today are increasingly targeting corporate payments in their effort to defraud organizations out of millions of dollars.

And with the number of annual attacks as well as the scope of financial damages continually on

the rise, it is clear that existing controls and security measures are simply not robust enough.

This leaves organizations extremely vulnerable to cyberfraud attacks, including by means of social engineering and insider fraud, among others.

87%

of companies with revenues at >\$1B were hit by payments fraud

30%

of companies experienced an increase in fraud instances

>\$100M

can be lost in a single incident

The key to mitigating the risk is a technology-driven approach that assures payments are made to valid accounts only.

nsKnox offers an end-to-end solution with PaymentKnox™

Integrating nsKnox's unique global account validation technology, master data security, and automated payment transaction scanning, PaymentKnox™ eliminates the vulnerabilities of manual processes with an automated, reliable and highly secured approach to preventing fraud in outgoing and incoming payments.

Incoming payments

Register and validate your bank account details to protect all incoming payments and your cash flow

Outgoing payments

Continuously verify banking details to prevent fund transfers from being diverted by cyber-fraudsters

End-to-end protection

For validating bank account ownership anywhere in the world, securing master data, and verifying payments

Protect B2B payments against cyberfraud

Stop the most sophisticated payment fraud attempts

PaymentKnox™ will help you make sure you are protected against the most elusive types of fraud.

Social engineering

- Business email compromise (BEC)
- Email account take over
- Deep fake AI

Cyberattacks

- Credential theft
- ERP attacks

Bad insiders

- Bypassing controls
- Covering traces

Harness the power of PaymentKnox™

Prevent manipulation

through detecting & alerting to discrepancies in data and transactions

Eliminate manual process errors

with an automated approach to payments protection

Avoid damage to finances

caused by fraud against accounts payable and accounts receivable
